DIGITAL FORENSICS & INCIDENT RESPONSE

Empowering you with expert-level digital investigation

(866)-217-7225 INFO@TTRTECHNOLOGY.COM TTRTECHNOLOGY.COM

Digital Forensics and Incident Response (DFIR) focuses on identifying, investigating, and resolving cybersecurity threats like data leaks, malware infections, or system breaches. This process involves gathering digital evidence, analyzing it thoroughly, and using that insight to assess the impact, stop the threat, and restore affected systems. DFIR makes use of advanced tools and techniques—such as forensic imaging, malware behavior analysis, network traffic review, and log tracking—to contain incidents and reduce damage. Ultimately, DFIR is designed to help organizations bounce back quickly from cyberattacks and avoid similar risks in the future.

Is your Business prepared for a Cyber Incident?

DFIR plays a critical role in defending your organization from the serious effects of cyber threats. If you're missing any of the core functions listed below, your business may not be ready to handle a cyber incident effectively.

Early Threat Detection

DFIR enables rapid identification of suspicious activity so that teams can act fast and reduce the impact. According to IBM’s 2021 Cost of a Data Breach report, companies that identified and contained breaches in under 200 days cut costs by an average of $1.2 million.

Limiting the Damage

Ransomware and other cyber threats can cause serious disruptions, data loss, and financial damage. DFIR reduces these risks by swiftly detecting and containing threats to minimize downtime. With ransomware damages projected to reach $20 billion, DFIR is critical for protecting your business.

Coordinated Incident Handling

A structured DFIR strategy allows businesses to efficiently manage the full lifecycle of a cyber event—from investigation to containment and recovery. Research from the Ponemon Institute shows that companies with detailed incident response plans saved an average of $1.23 million per breach.

Future-Proofing Against-Threats

Beyond just responding to incidents, DFIR helps uncover system weaknesses before attackers can exploit them. Proactive assessments, like vulnerability scans, identify risks in your IT environment, allowing you to fix them before they become real problems.

Our Approach & Methodology

- **Identification:** Determine what happened, which systems are affected, and how severe the impact is.
- **Collection:** Gather critical data like system logs, file copies, and network activity.
- **Preservation:** Ensure evidence remains unchanged and properly handled for legal validity.
- **Analysis:** Study the evidence to uncover the root cause and full extent of the incident.
- **Reporting:** Document the findings, actions taken, and offer recommendations to avoid future threats.
- **Remediation:** Take corrective actions to contain the damage and strengthen defenses.
- **Legal Compliance:** Ensure all steps follow legal and regulatory standards, including data privacy laws.

Types of DFIR Services

- **Network Forensics:** Analyze network traffic to detect unauthorized access, malware activity, or data exfiltration.

- **Memory Forensics:** Examine system memory (RAM) to uncover hidden threats or recover volatile data lost during crashes.

- **Malware Analysis:** Deconstruct malicious software to understand its behavior and develop effective defenses or removal strategies.

- **Cybercrime Investigations:** Investigate cybercrimes like hacking, identity theft, and unauthorized data access to support legal or internal actions.

- **Incident Response:** Rapid detection, containment, and mitigation of security breaches to minimize business disruption.

- **Forensic Data Recovery:** Retrieve critical data from damaged, encrypted, or corrupted storage devices such as hard drives and flash media.

- **Forensic Accounting:** Examine financial records to identify irregularities, fraud, or compliance violations.

- **Social Media Investigations:** Collect and analyze data from social platforms to detect fraud, impersonation, or cyber harassment.

- **Digital Evidence Analysis:** Investigate emails, chat logs, files, and digital records to support internal investigations or legal proceedings.

- **Cyber Threat Intelligence:** Collect, analyze, and deliver actionable intelligence on current and emerging cyber threats to strengthen your defenses.

Why Choose TTR Technology for DFIR?

TTR Technology delivers top-tier Digital Forensics and Incident Response (DFIR) services to help businesses effectively manage cyber incidents like data breaches, malware attacks, and system intrusions. Outsourcing DFIR to TTR Technology comes with several key benefits:

- **Expertise You Can Trust:** Our team of skilled professionals brings years of hands-on experience, advanced tools, and deep technical knowledge to investigate and respond to complex cyber threats.

- **Cost-Effective Solutions:** Building an internal DFIR team is expensive. TTR Technology offers a more affordable alternative by providing fully equipped services without the overhead costs.

- **Rapid Response:** Cyber threats need immediate attention. Our 24/7 DFIR team is always ready to respond quickly, minimizing damage and reducing risk.

- **Compliance & Risk Reduction:** TTR Technology ensures all investigations follow industry best practices and meet legal and regulatory standards—helping protect your business from legal and financial consequences.

- **Flexible & Scalable:** Whether you're dealing with a minor issue or a major breach, our DFIR services scale to match your needs—offering fast, effective support whenever you need it.

ABOUT

TTR TECHNOLOGY

TTR Technology’s Digital Forensics & Incident Response service helps you quickly identify, analyze, and contain cyber threats before they escalate. Minimize damage, recover fast, and strengthen your defenses. Contact us today to protect your business with expert incident response and forensic investigation.

MISSION

TTR Technology provides managed IT services and cybersecurity solutions that protect your data, optimize business operations, and empower you to grow with confidence.

SOLUTIONS

- Innovation
- Support
- Reliability
- Scalability
