DID YOU KNOW ?

- The global Mobile Device Management (MDM) market is expected to reach USD 14.36 billion by 2028.
- 97% of employees prefer that organizations implement a BYOD (Bring Your Own Device) policy.
- The global COVID-19 pandemic has led to a significant increase in MDM adoption due to the rise in remote work.

Mobile Device Management as a Service (MDMaaS) is a cloud-based solution that helps organizations manage and protect mobile devices remotely using a centralized system. Unlike traditional setups, it doesn't require any physical servers or on-site software. MDM covers tools and methods used to oversee work-related smartphones, tablets, and laptops.

MDMaaS includes core features like setting up devices, enforcing security rules, managing apps, and safeguarding data—all through the cloud. The service provider takes care of system maintenance and infrastructure, while users access everything through a web portal or mobile application.

Why MDM Is Important for Every Company

Healthcare In the healthcare sector, MDM is essential to ensure patient data remains secure and confidential. With MDM, healthcare providers can remotely manage and control mobile devices, ensuring that only authorized personnel access sensitive patient information.

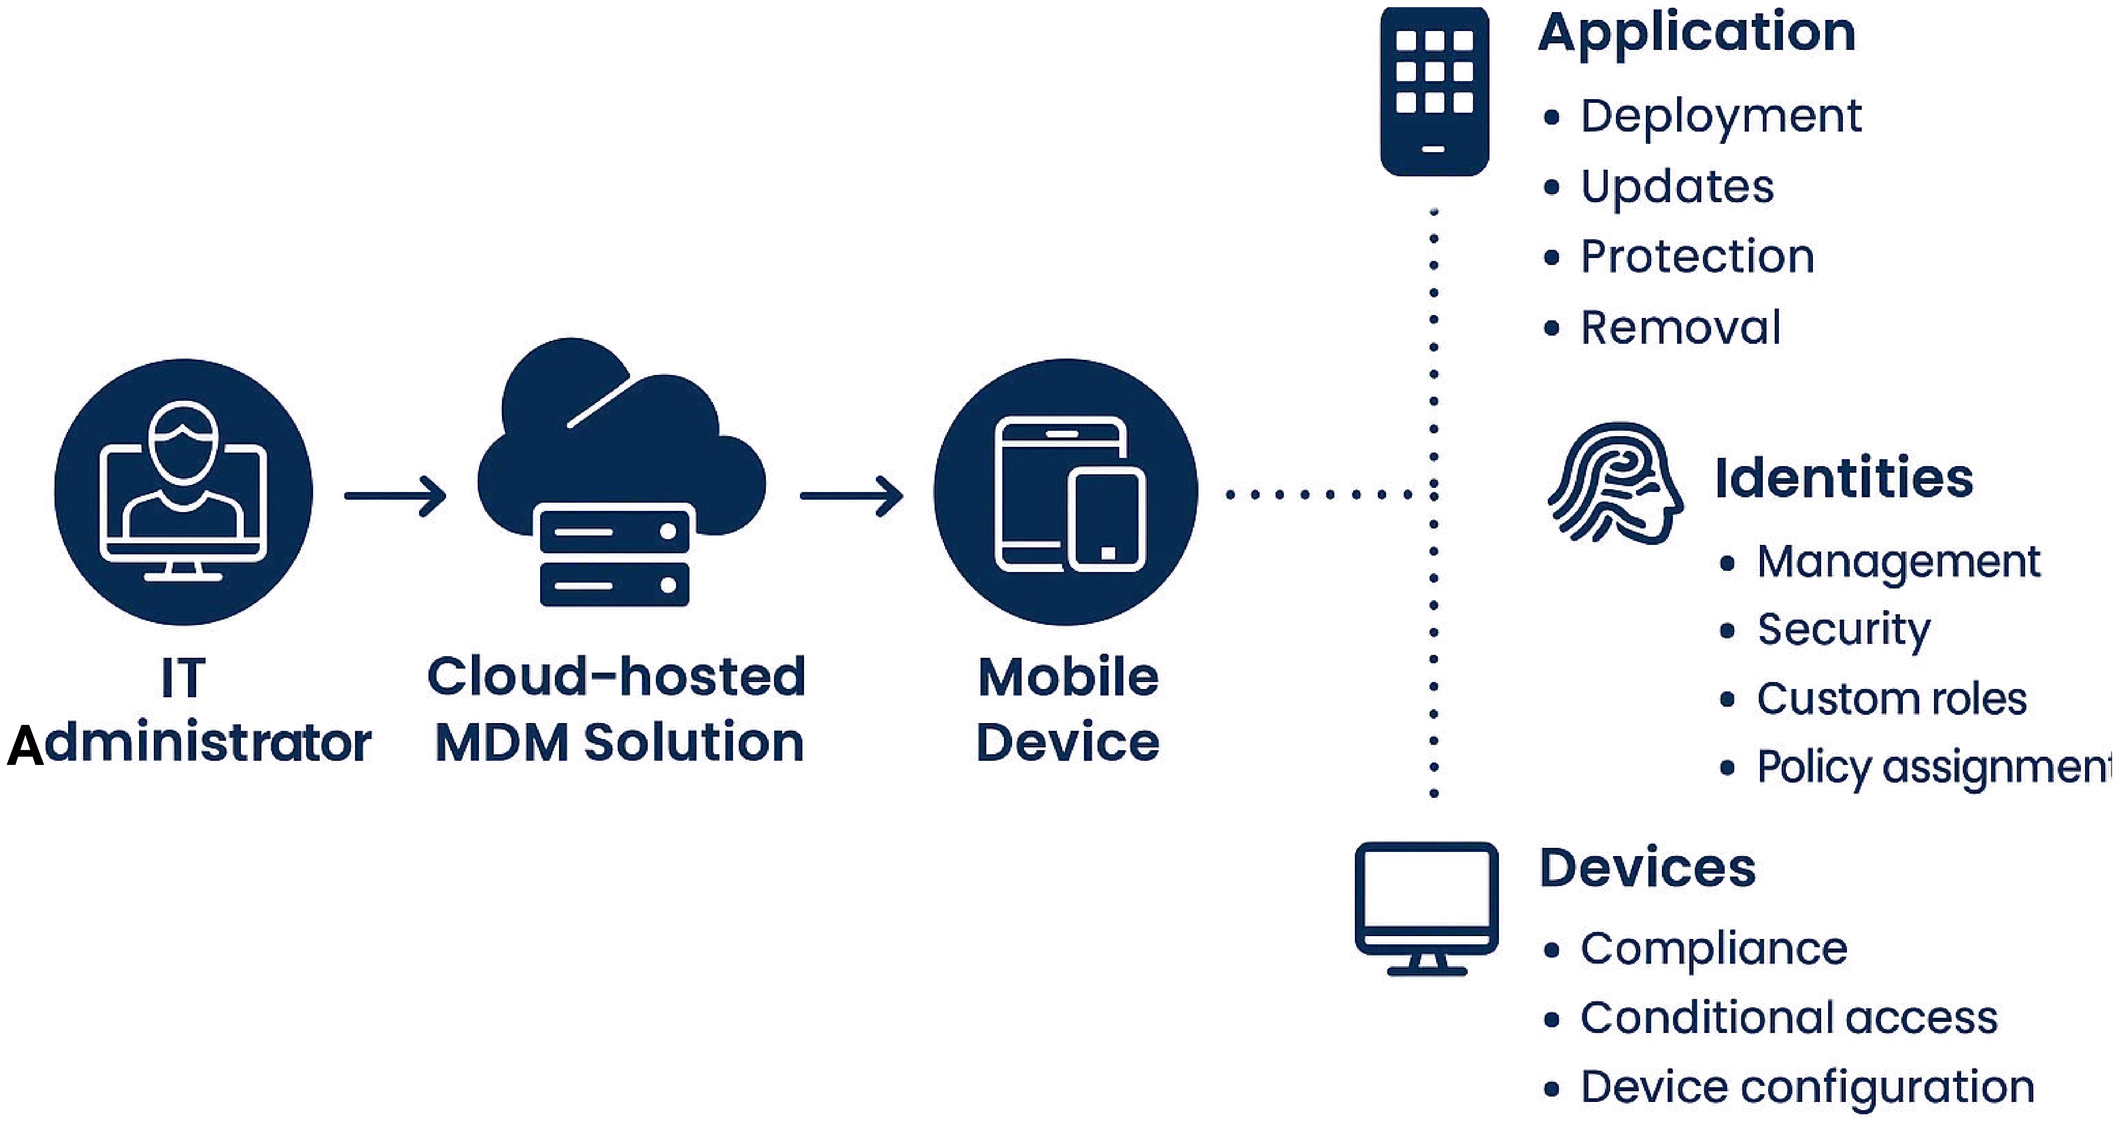

Retail In the retail industry, MDM plays a vital role in managing inventory, tracking sales, and maintaining communication with employees. It also provides the ability to remotely lock or wipe devices in the event of theft or loss.

Financial The financial industry is highly regulated, and MDM helps organizations comply with standards such as PCI DSS and GDPR. MDM also allows for remote wiping of sensitive financial data from lost or stolen devices, helping prevent data breaches.

Education In the education sector, MDM is used to manage mobile devices for students and teachers. It enables administrators to control which apps are installed and offers the ability to remotely wipe devices in case of loss or theft.

Manufacturing In manufacturing, MDM ensures proper use of mobile devices on the factory floor. It helps verify that employees use authorized software and tools, and can remotely wipe devices to prevent sensitive data from being exposed.

HOW DOES TTR TECHNOLOGY MDM-AS-A-SERVICE WORK?

TTR TECHNOLOGY MDM-AS-A-SERVICE – BENEFITS

- Controls the usage of the organization's devices (mobile phones, tablets, and laptops).
- Isolation of company & personal data on BYOD.
- Forbid the enrollment of non-compliant devices.
- Full control of the company-owned devices.
- Application restriction based on the company/department profile.
- Access restrictions to resources/data based on enterprise compliance policy.
- Manage the company-owned devices or BYOD on a single pane of glass.
- Enforce device and data security policies.
- Containerization of company and personal data in case of BYOD.
- Remote wipe in case devices are lost or stolen.

- Location tracking of lost devices.
- Encryption of storage & application data on mobile devices.
- Conditional access control policies.

TTR TECHNOLOGY APPLICATION MANAGEMENT

- Push applications to devices based on the user groups.
- Enable the application to run with specific settings.
- Restrict user actions (copy-and-paste, save, and view) on devices to protect company resources/data.
- Identity-based access control on application data.
- Blacklist & whitelist of applications.
- Web content filtering.
- Integrate & deploy third-party Mobile Threat Defense to protect the device against security threats.
- Upgrade OS and patch-supported applications to the latest available version.
